

Teammate Commit Summary

The Brief

This summary reviews what your teammate has already contributed in the echobank repository based on git history. Her author names appear as "Lovable" and "lovable". She has 2 commits, both on 2026-07-31.

Problem statement

Identify the work already completed by your teammate so the remaining implementation can be separated from project setup and documentation.

Commits

1. 3e41d8c - template: tanstack_start_ts_current-a45e7d0d9bfb
2. bb89ba8 - Add project README

Checklist

1. She created the initial project scaffold and repository configuration.
2. She set up the frontend shell with Bun, Vite, TypeScript, ESLint, Prettier, and project metadata.
3. She added the core app entrypoints and routing files, including src/start.ts, src/server.ts, src/router.tsx, src/routes/__root.tsx, and src/routes/index.tsx.
4. She added a reusable UI component layer under src/components/ui/, including buttons, dialogs, forms, tables, tabs, charts, sidebar, inputs, and tooltips.
5. She added shared support code such as utilities, mobile hooks, error handling, and base styling.
6. She wrote the initial README and then expanded it substantially in a follow-up commit.

Practical summary

Her work established the project foundation: repo setup, frontend structure, UI primitives, styling, and documentation. Most later feature-level implementation in the repository was committed by gpt-engineer-app[bot], not by her author identity.
